COURSE UNIT (MODULE) DESCRIPTION

Course unit (module) title	Code
Big Data Analytics	

Staff	Core academic unit(s)
Coordinator: Dr Dmitrij Celov **Other(s):**	Department of Econometric Analysis Faculty of Mathematics and Informatics

Study cycle	Type of the course unit
First (Bachelor's)	Optional

Mode of delivery	Semester or period when it is delivered	Language of instruction
Face-to-face	Semester 5	English

Requisites	
Prerequisites: Statistical Theory, Econometric Theory and Practice	**Co-requisites (if relevant):**

Number of ECTS credits allocated	Student's workload (total)	Contact hours	Individual work
5	130	36	94

Purpose of the course unit
The purpose of the course is to acquaint students with the principles of analysis of big data, and to enable them to apply high-dimensional models, using tools from statistical, machine learning and econometrics to solve practical problems.

Learning outcomes of the course unit	Teaching and learning methods	Assessment methods
1. understand the problems related to prediction and inference when dealing with big data and/or high-dimensional models	Lectures and individual work	Written exam (70%) Labs (20%) Practicals (10%)
2. know and apply methods of supervised learning	Lectures, labs with R, practical training, and individual work.	
3. know and apply methods of unsupervised learning		
4. understand the specificity of approximations in high dimensions		
5. evaluate the empirical adequacy of models		

Content	Lectures	Tutorials	Seminars	Workshops	Laboratory work	Internship	Contact hours, total	Individual work	Tasks for individual work
			Contact / Individual work: time and assignments						
1. Introduction to high-dimensional methods, big data and big p inference	4				1	1	**6**	**14**	[V], [KMO], [ISLR] Ch. 12, [ESL] Ch. 1-2,
2. Supervised learning: cross-validation and penalized estimation, regression trees and random forests, bagging and boosting	4				1	1	**6**	**14**	[ISLR] Ch. 3, 5,7,8.2 [ESL] Ch. 3, 5, 7, 8.7, 10
3. Classification and support vector machines	4				1	1	**6**	**14**	[ISLR] Ch. 4, 9 [ESL] Ch. 4, 12
Midterm exam									
4. Unsupervised learning: density estimation, principal components and factor models, clustering, topic models	4				1	1	**6**	**24**	[ISLR] Ch. 10 [ESL] Ch. 14
5. Asymptotic approximations in high dimensions	4				1	1	**6**	**14**	[CGHST], [CHSa],
6. Inference in high-dimensional models	4				1	1	**6**	**14**	[CHSb]
Final exam									
Total	**24**				**6**	**6**	**36**	**94**	

Assessment strategy	Weight (%)	Deadline	Assessment criteria
Practical training	10	Regular	A correct solution of 2 equally valued tasks is required to get the maximum.
Labs	20	End of term	4 equally valuated tasks correctly implemented/solved are required to get the maximum.
Midterm examination	35	Mid-term	10 short questions and a solution of 2 exercises.

Final examination	35	End of term	4 points out of 10 from the final exam is required to pass the course. Given this condition holds, the final mark is obtained as a weighted average from the two components.	

Author (-s)	Publishing year	Title	Issue no. or volume	Publishing house or web link
Required reading
